EDUCATION

Nupat Technology <i>Software Development</i>	Lekki, Lagos March 2025
Enugu State University of Science and Technology <i>Bachelor of Agriculture (B.Sc.) CGPA: 4.01</i>	Agbani, Enugu December 2016 – August 2022
Notre Dame Academy Enugu <i>Senior School Certificate</i>	Awkunanaw, Enugu September 2010 - July 2016

SKILLS SUMMARY

Spoken Languages:	Igbo – Native/Fluent, English – Fluent
Freelance Gigs:	AI Data Annotation, Image Labelling and Captioning, Audio Evaluation
Programming Languages:	JavaScript, TypeScript, Solidity
Framework:	Foundry, Remix IDE, Hardhat, OpenZeppeline
Libraries:	React, Ether.js, Flowbite
Tools:	Vite, VS Code, PostgreSQL, AI Tools (Claude AI, v0 by Vercel, Phind, Co-Pilot ChatGPT), Git version Control, Tailwind CSS, Excel, PowerPoint.
Platforms:	GitHub, Slack, Discord, Vercel, Firebase, Canva, Figma, Linux (Ubuntu)

CAREER HISTORY AND ACCOMPLISHMENTS

Nupat Technology Software Developer (Intern) - March 2025 – Present	- Designed and implemented well-tested, documented web applications using modern Web technologies (React, JavaScript and Tailwind CSS) - Built responsive, accessible user interfaces optimized for performance across mobile and desktop devices. - Created and deployed smart contracts, integrating them with frontend applications - Participated in code reviews, applying best practices for maintainability, readability, and performance. - Deployed and operated applications in a Linux (Ubuntu) environment, managing Node.js tooling and development servers. - Collaborated with developers and community members on technical specifications, feature planning, and implementation decisions.
Chakra Server Community Moderator (Customer Care) - September 2024 – June 2025	- Supported and engaged a global developer community, providing technical guidance and product advocacy. - Collaborated with engineers and community members to clarify technical requirements and improve documentation quality. - Identified recurring user issues and communicated actionable feedback to support product and community growth.

PROJECTS

Ethereum.org Open-Source Contribution | [Link](#)

December 2025

(Open Source / Web3 Documentation & Development)

- Contributed to the Ethereum.org open-source repository, improving documentation clarity and developer onboarding experience.
- Reviewed and enhanced technical content to ensure accuracy and accessibility for new blockchain developers.
- Participated in collaborative pull requests, adhering to open-source contribution standards and code review processes.
- Strengthened understanding of Ethereum ecosystem standards and community-driven development workflows.

Hedera African Hackathon (HashFi) | [Link](#)

October 2025.

Blockchain / DeFi Infrastructure Project

- Architected and deployed the Yield Passport smart contract in Solidity, enabling on-chain tracking and verification of user yield performance.
- Designed contract logic for secure state management, access control, and gas-efficient execution.
- Implemented modular contract structure to support future integrations with DeFi protocols and yield aggregators.
- Collaborated with frontend and backend teams to integrate Web3 wallet interactions and contract event handling.
- Conducted manual testing and debugging using Hardhat, ensuring reliability and preventing common smart contract vulnerabilities.
- Managed Git version control and resolved complex rebase conflicts during collaborative development.

NFT Marketplace Website | [Link](#)

June 2025

(Frontend Web Application Project)

- Developed frontend interfaces using React, implementing dynamic product listings, and interactive UI components.
- Optimized user experience through component reusability and improved state management.
- Integrated modern UI design patterns to enhance performance

TRAINING

- Frontend Web Development – Completed
- Blockchain Development – Completed
- Software Security Researcher- In view
